## EXPERIMENT- 09

**Student Name:** Divas Kumar

**UID:** 23BCS13735

**Branch:** BE-CSE

**Section/Group:** KRG 1(A)

**Semester:** 05

**Date of Performance:** 28/10/25

**Subject Name:** ADBMS

**Subject Code:** 23CSP-333

**1. Aim:** To create and connect a PostgreSQL database instance on **Amazon RDS (Relational Database Service)**

### **2. Objective:**

- To understand the steps involved in launching a database instance using Amazon RDS.
- To configure a database for public access and connect it with a local client (pgAdmin).
- To perform basic SQL operations (CREATE, INSERT, SELECT).

### **3. Tools / Software**

- Amazon Web Services (AWS)
- PostgreSQL
- pgAdmin 4
- RDS (Relational Database Service)

### **4. Program:**

Step 1: Create and Configure Database Instance

1. Login to AWS Console → RDS → Create database, select Standard create and PostgreSQL under the Free Tier template.
2. Set DB identifier: dbms-db, Username: postgres, choose db.t3.micro, 20 GB gp2 storage, and enable Public access.
3. Click Create database and wait until the status shows Available in the RDS dashboard.

The screenshot shows the AWS RDS (Relational Database Service) interface. In the left sidebar, under 'Aurora and RDS', the 'Databases' option is selected. The main area displays a table titled 'Databases (1)'. The single entry in the table is 'dbms-db', which is highlighted in blue. The table includes columns for 'DB identifier', 'Status', 'Role', 'Engine', 'Region ...', and 'Size'. The 'Status' column shows 'Available'. The 'Engine' column is listed as 'PostgreSQL'. The 'Region ...' column is listed as 'eu-north-1a'. The 'Size' column is listed as 'db.t4g.micro'. At the top right of the table, there are buttons for 'Group resources', 'Modify', 'Actions', and 'Create database'.

## Step 2: Configure Security Group (Allow Local Access Only)

1. In AWS Console → go to RDS → Databases → click your DB (dbms-db).
2. Open the Connectivity & Security tab.
3. Under VPC security groups, click the linked group name (it opens EC2 security groups).
4. Click Edit inbound rules → Add rule
  - Type: PostgreSQL
  - Protocol: TCP
  - Port: 5432
  - Source: My IP
5. Click Save rules.

## Step 3: Connect Database Using pgAdmin

1. Open pgAdmin 4 on your local system.
2. Right-click Servers → Create → Server.
3. Under the General tab, enter the name: postgre.
4. Under the Connection tab, fill in the following details:
  - Host name/address: dbms-db.xxxxxxx.rds.amazonaws.com
  - Port: 5432
  - Username: postgre
  - Check Save password.
5. Click Save to connect your RDS PostgreSQL database.
